Interface Development Kit (IDK)

High-level overview of what is contained in the Interface Development Kit:

The IDK is designed to assist in developing customized import and export applications for transferring data between the BSI software products and other external applications. In particular, the IDK assists in creating customized interfaces for organizations using the BSI software products.

Included in the IDK:

- Software package
- Interface Development Kit guide book
- Data field descriptions
- Example code

The IDK is intended for use by alliance partners and other third-party developers who are interested in developing an interface to the BSI software products. Advanced users will also benefit from this documentation if they wish to export information for custom reporting needs.
